FACT SHEET – HIV/AIDS and Pediatrics (<13 Years of Age) in Maryland
November 2009

- Of the 2,866 reported HIV diagnoses during 2007 in Maryland, 10 (0.3%) were among pediatric cases (<13 years of age).

- The number of pediatric HIV cases (<13 years of age) peaked in 1991 and decreased to 5 pediatric HIV cases (with or without AIDS) born in 2007.

- Of the 1,211 reported AIDS diagnoses during 2007 in Maryland, there were no reported AIDS diagnoses among pediatric cases (<13 years of age).
- Of the 28,270 total living HIV cases (with or without AIDS) on 12/31/2007 in Maryland, 108 (0.4%) were pediatric cases (<13 years of age). This was a rate of 11.3 cases per 100,000 children (<13 years of age). Or in other words, 1 in every 8,860 children (<13 years of age) in Maryland was reported to be living with HIV.

- Of the 108 total living HIV cases (with or without AIDS) on 12/31/2007 in Maryland among pediatric cases (<13 years of age), 55.6% were female and 44.4% were male.

- Of the 108 total living HIV cases (with or without AIDS) during 2007 in Maryland among pediatric cases (<13 years of age), 89.6% were non-Hispanic black, 6.6% were non-Hispanic white, 1.9% were Hispanic, and 1.9% were other races.
